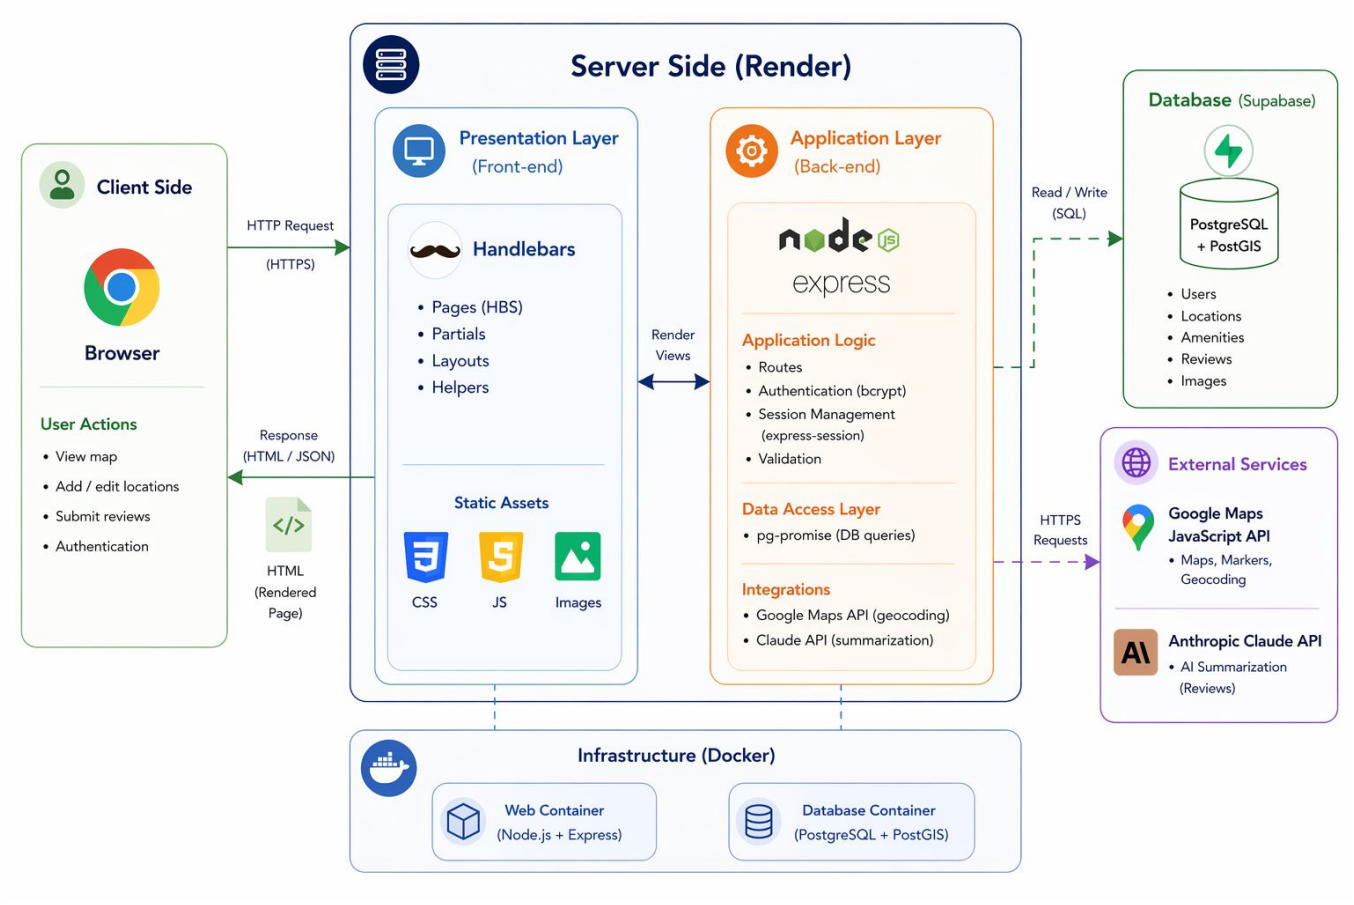
Tooling

- IDE - VS Code - 5 stars
- APIs - Google Maps + Claude/Anthropic - 4 stars
- Front End/UI - Handlebars + CSS - 5 stars
- Server + Framework - Node + Express JS - 5 stars
- Version Control - GitHub - 5 stars
- Project Management - Agile - 5 stars
- Project Tracking - GitHub Project Board - 3 stars
- Database Hosting - Supabase - 5 stars
- Deployment environment - Render - 5 stars
- Testing - Mocha, Chai - 5 stars
- Database - PostgreSQL + PostGIS - 5 stars

Architecture Diagram



Team Meetings

- Discussed plans in the weekly TA meeting
- Met online over discord when two or more users needed to work together on a feature
- Met in person when necessary to coordinate group efforts

SECTION

CHALLENGES

External API Issues

- Google Maps permissions would act up on deploy vs. local and would occasionally not show the map
- DB Hosting is necessary for this type of project, which introduces another dependency
- The more dependencies, the more sensitive information.

Pathing and File Organization

- Integration of external dependencies creates redundancy with certain files
- Working within the given framework/directory structure.
- Because we didn't start with correct structure, our remediation was 2x the work it would have been to start correctly

Sensitivity and Security

- Sharing sensitive keys
- Managing environment security
- Password hashing

SECTION

FUTURE SCOPE

Future Scope

- Leaderboard feature - Users who add locations with the most 3+ star reviews are given points and ranked on a leaderboard; incentivises people to add locations
- Expand across the country
- Update/ edit location
- Sponsorships / Business Partnerships

Future Scope

- Map Legend
- Email verification
- Sort feature for the map
- Show path to nearest amenity to the user
